

- + #1 UI is the first screen
- + Auto check wifi info, SSID MUST be "Firefly_AP", if not display wrning and exit app
- + If wifi info is OK (connected), load this UI
- + Fistr option points to #2 UI
- + Another options point to #3 UI

- + **How to input the node adding ???**

- + The number of node will load on display will base on the number of node user inputted in #2 UI
- + Users can tap and hold to drag node symbol anywhere they want within the screen region
- + Enable horizontal
- + Users tap on node symbol will cause pop-up the dialogue as in #4 UI

- + User can edit Node Addr,
- + when "Confirm" is pressed, app should do the following things:
 - check and warning user that Node Addr was changed (if any)
 - send TCP cmd with user input
